

ABSTRACT OF THE DISCLOSURE

A panel displaying method of an order receiving POS
5 terminal is used to receive an order for an article by a customer
in, for example, a fast-food restaurant. The panel displaying
method, wherein the POS terminal includes a display unit that
displays a touch panel formed of plural keys operated when a
customer orders an article comprises the step of pop-up
10 displaying on the display unit the touch panel formed of keys
each corresponding to an optional item when the article is
ordered. The panel displaying method permits easy operation,
registering optional items, and updating a menu with no
troubles.
